

PERMISSION REQUESTED

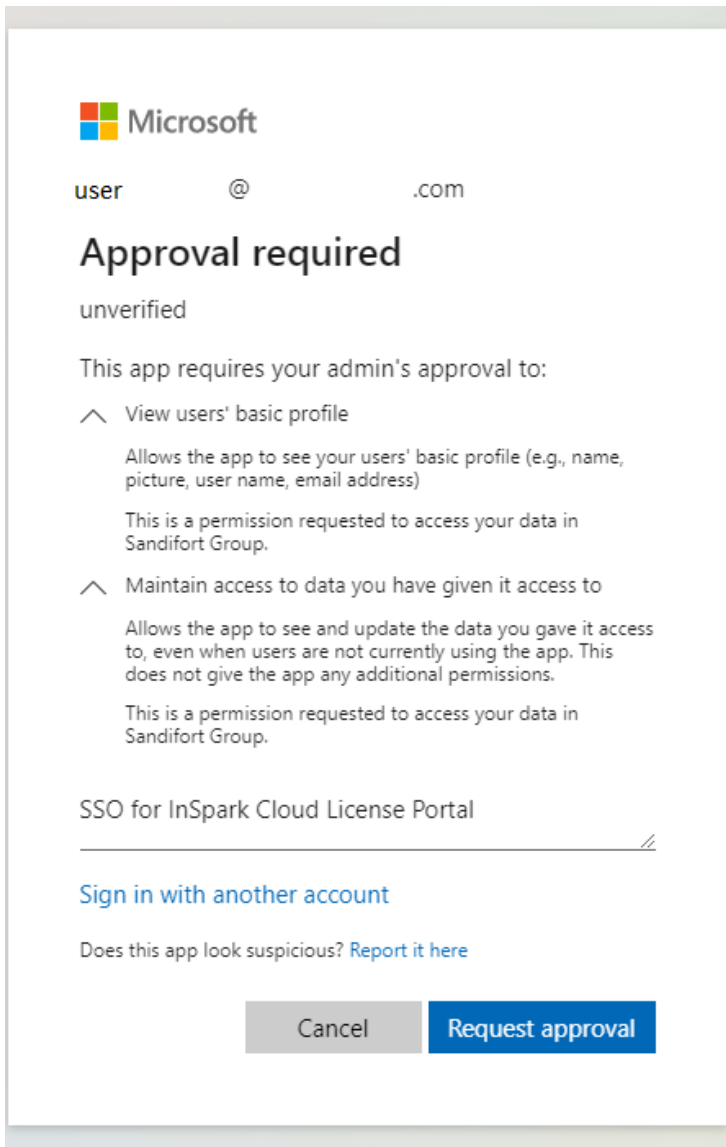

Er kan een melding komen waarin toestemming gevraagd moet worden. Dit betekent dat deze SaaS applicatie aan jullie kant toegevoegd moet worden als trusted app/URL. De onderstaande stappen kunnen door de admin doorlopen worden om de toestemming te verlenen.

1. Login.

2. Klik op 'maintain access to data you have given it access to'.

3. Indien mogelijk vraag toestemming en geef de reden op (zie 2 en 3, request permission en request app approval).

My Pending All (Preview)

When users try to access an application but are unable to provide consent, they can send a request for admin approval. Admins can control which applications your organization approves. Configured reviewers will be able to evaluate their pending consent requests in the "My Pending" queue. Global administrators, Application administrators, Cloud application administrators, and Global readers will be able to see all pending, expired, and completed consent requests in the "All" queue. [Learn More](#).

Search by app name

Name	Application ID	Created Date	Last Updated Date
insparkprod	52f44774-271a-445e-b01a-94fc9d315bf1	11/14/2022	11/14/2022

Help

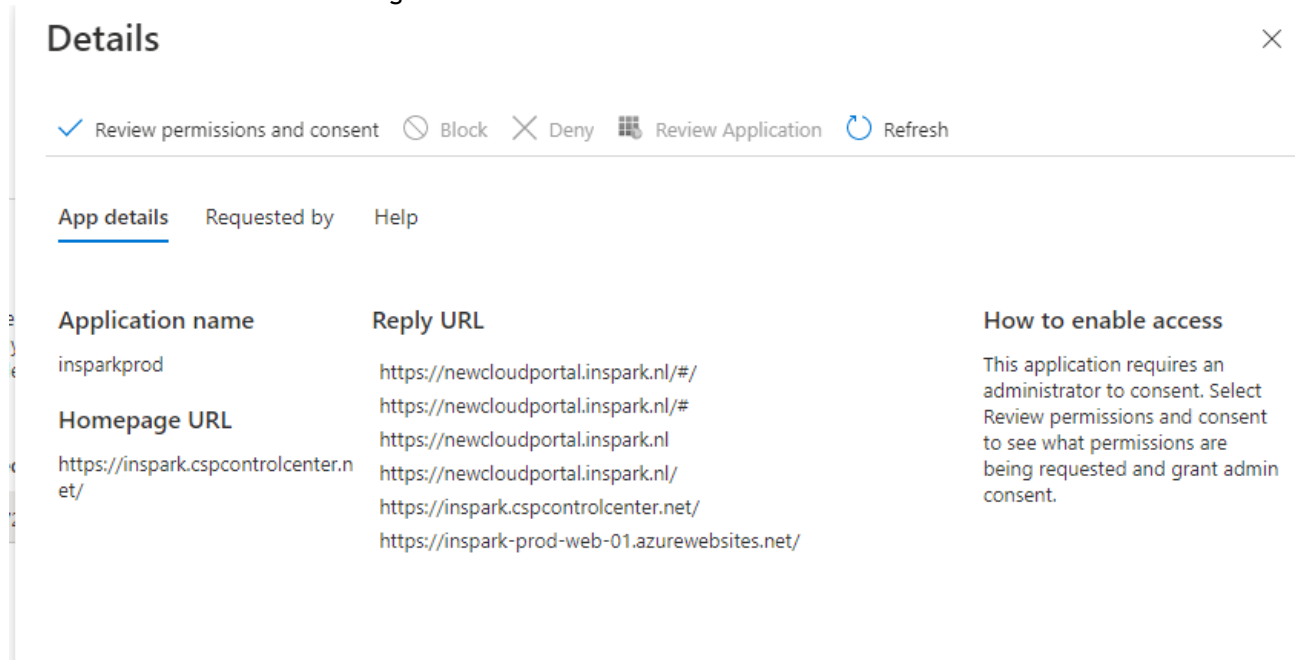

Select an application to review who requested access. After selecting an application, you will be able to approve, block, or deny the admin consent requests for the selected application.

Approving the application requires you to review the application's permissions and grant admin consent. Granting admin consent to the application will add it to your tenant and all users will be able to access it unless you restrict access to the application.

Blocking the application means that it will be added to your tenant with a disabled status. Users won't be able to use it or access it. Only designated reviewers will be able to perform this action from the "My Pending" tab, and only users with the permission to create service principals from the backing application can perform this action.

Denying the admin consent request will not block or add the application to your tenant. The request will be ignored, but may return if another user requests access. Only designated reviewers will be able to perform this action from the "My Pending" tab.

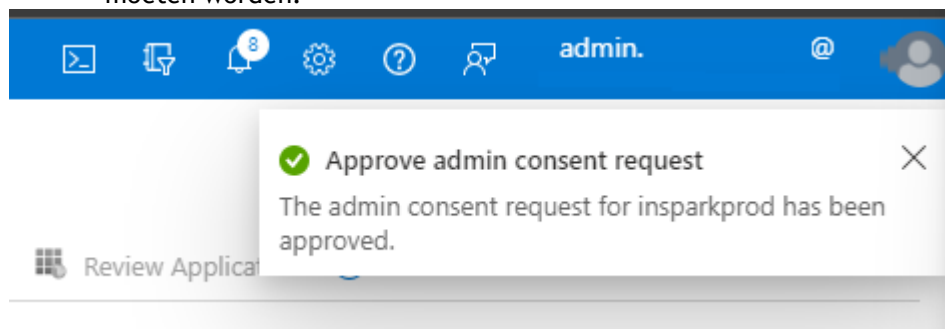

- De admin kan via de Azure portal > Enterprise Applications een consent geven op de applicatie (zie 4 Enterprise application admin consent). Deze admin heeft minimaal de 'Cloud Application Administrator' rol nodig om dit uit te voeren.

The screenshot shows the 'Details' page for an application in the Azure portal. At the top, there are navigation buttons: 'Review permissions and consent' (checked), 'Block', 'Deny', 'Review Application', and 'Refresh'. Below this, there are tabs for 'App details', 'Requested by', and 'Help'. The main content area is divided into three columns:

Application name	Reply URL	How to enable access
insparkprod	https://newcloudportal.inspark.nl/#/	This application requires an administrator to consent. Select Review permissions and consent to see what permissions are being requested and grant admin consent.
Homepage URL	https://newcloudportal.inspark.nl	
https://inspark.cspcontrolcenter.net/	https://inspark.cspcontrolcenter.net/	
	https://inspark-prod-web-01.azurewebsites.net/	

- Afhankelijk van de configuratie moet vervolgens 1 of alle huidige en toekomstige gebruikers toegang verleend worden door op de application (5 details application). Indien de security instelling per gebruiker zijn, dan zal via acces reviews de gebruikers individueel geautoriseerd moeten worden.

The screenshot shows the top navigation bar of the Azure portal with the user 'admin.' logged in. A notification toast is displayed in the center, stating: 'Approve admin consent request' with a green checkmark icon. Below the title, it says: 'The admin consent request for insparkprod has been approved.' The background shows the 'Review Application' page.

- Indien dit succesvol toegestaan wordt zal er kort rechtsboven de volgende melding volgen (6 approval succeeded).

Mocht dit toch niet lukken, dan graag met service@inspark.nl contact opnemen.
